DETAILED ACTION

The Preliminary Amendment

Receipt is acknowledged of the preliminary amendment filed on April 30, 2002.

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. § 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. § 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 30-58 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The lack of an antecedent for “the signals” and “the detection signals” in line 7 of claim 30; “the ROIs” in line 1 of claim 33; “image channels” in line 2 of claim 34 and line 3 of claim 40; “the adjusted spectral width” bridging lines 1 and 2 of claim 47; “the monitor” in line 2 of claim 49; “the adjusted wavelength” bridging lines 1 and 2 of claim 50; “the adjusting element” bridging lines 2 and 3 of claim 50; “the monitor” in line 3 of claim 50; and “the quantitative analysis” bridging lines 1 and 2 of claim 57 and 58 renders these claims and any claim dependent therefrom indefinite.

Claims 32, 33, 35-37, 39, 43, 45 are indefinite in that ROIs is not defined.

Claim 58 is indefinite in that PCA is not defined.

The claims are replete with indefinite language. Essential steps appear be missing in

Art Unit: 2877

claim 30 between the steps of generating and storing. There is a total disconnect between the generating and storing steps in independent claim 30 and the limitations set forth in the dependent claims. All of the steps of a method for investigating specimens must be set forth in active steps, in operable sequence for an end result.

Prior Art

Dabiri et al (US 5,871,628) disclose a method for investigating specimens in which an imaging spectrograph produces a series of frames. Each frame has one dimension corresponding to position and another dimension corresponding to wavelength spectra. The timing between frames is set to gather fluorescent light from fragment groups as they pass through a read zone. See Fig. 7.
